What Is Xanax?

Xanax is a prescription **benzodiazepine** used to treat anxiety and panic disorders. It works by enhancing the activity of **GABA**, a neurotransmitter that calms brain activity, reducing excessive nervous stimulation and producing a sense of relaxation.

Primary Uses of Xanax:

- Treatment of generalized anxiety disorder (GAD)
- Management of panic disorders
- Relief from short-term anxiety episodes
- Support in stress-related conditions under medical supervision

Xanax helps patients regain control over symptoms, improving daily function, focus, and overall quality of life.
